

TalkingToad

Free, plain-English SEO audits built for small businesses and nonprofits

TalkingToad finds the technical problems that keep your website from showing up in Google and AI search — then explains each one in plain language and, for WordPress sites, lets you apply fixes from the app. It runs in your browser, costs nothing, and needs no installation or technical skill.

What it does

- ▶ **Crawls your whole site** and checks every page (500 by default, adjustable) for broken links, missing or duplicate titles and descriptions, redirect problems, heading errors, and security gaps.
- ▶ **Scores your site 0–100** and ranks the top fixes by impact and effort, so you know exactly where to start.
- ▶ **Lets an admin apply WordPress fixes from the app** — it uses AI to suggest content like titles, descriptions and tags where appropriate; you review and approve each one before it's applied (Yoast and Rank Math supported). No code.
- ▶ **Checks AI readiness** — how easily tools like ChatGPT and Google's AI can read and quote your content, plus llms.txt support.
- ▶ **Produces client-ready reports** — branded PDF audits and CSV exports you can hand to a board, funder, or developer.

How it's different from enterprise SEO tools

	Enterprise tools (Screaming Frog, Ahrefs, SEMrush)	TalkingToad
Cost	From ~\$100 per seat, per year	Free
Setup	Desktop install or paid account	Open a browser — nothing to install
Results	Dense technical jargon	Plain-English, with fix instructions
Fixing issues	You export a list and fix manually	Apply WordPress fixes from the app
Built for	SEO agencies & marketers	Small businesses & nonprofits

Why it's worth it

- ▶ **Saves money** — professional-grade auditing without subscription fees or consultant invoices.
- ▶ **Anyone can use it** — no SEO background required; the tool tells you what's wrong and how to fix it.
- ▶ **Gets you found** — better search and AI visibility means more customers, donors, volunteers, and reach.
- ▶ **Safe and gentle** — audits only pages you own, one request at a time, without slowing your site.

Open it in your browser, enter your website address, and click Start Crawl.
